CDN Links

Both React and ReactDOM are available over a CDN.

```
<script crossorigin src="https://unpkg.com/react@16/umd/react.development.js"></script>
<script crossorigin src="https://unpkg.com/react-dom@16/umd/react-dom.development.js">
</script>
```

The versions above are only meant for development, and are not suitable for production. Minified and optimized production versions of React are available at:

```
<script crossorigin src="https://unpkg.com/react@16/umd/react.production.min.js">
</script>
<script crossorigin src="https://unpkg.com/react-dom@16/umd/react-
dom.production.min.js"></script>
```
To load a specific version of `react` and `react-dom`, replace `16` with the version number.

Why the `crossorigin` Attribute?

If you serve React from a CDN, we recommend to keep the `crossorigin` attribute set:

```
<script crossorigin src="..."></script>
```

We also recommend to verify that the CDN you are using sets the `Access-Control-Allow-Origin: *` HTTP header:

Status Code: ● 304
Remote Address: [2400:cb00:2048:1::681(
Referrer Policy: no-referrer-when-downgra

▼ Response Headers
access-control-allow-origin: *
cache-control: public, max-age=31536000

This enables a better error handling experience in React 16 and later.
